

Track Unreleased Version

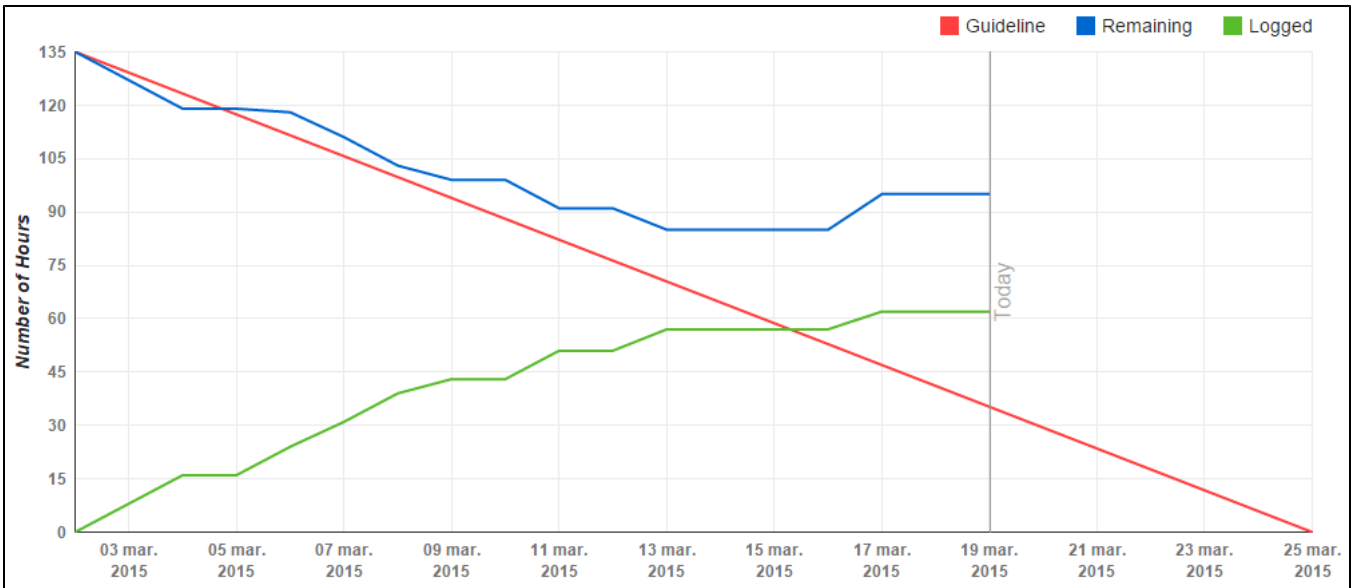

If you are tracking an unreleased version, you will see that status on the top of the page.

Version 4.2 UNRELEASED

📅 Start: 02/Mar/15 Released: 24/Mar/15

The version name is displayed there, as the version date range.

If the version is unreleased yet, the chart will not be painted completely. You will see a vertical line for today date.

It isn't usual to log work for future dates, but JIRA allows that so we have managed it. Future log works will appear with a dash line, because we cannot ensure that there won't be more log works.
