

Issues indicator for non-work periods (vacation, holidays, days off, etc..)

When Workload is associated with the Fiesta plugin, the calendar will show non-work days or periods as defined in the Fiesta plugin. It is possible that in some cases, an issue's start and due dates will coincide with a non-work period, which would lead to an inconsistency.

With this new feature, Workload will now use the  icon to indicate the days of an issue whose start and due dates fall within a non-work period, as shown in the image below:

Important

The icon will only appear if an issue's start and due dates fall within a non-work period. If any of an issue's days have work hours, the icon is not shown and the workload would be calculated using these days.
