

Configuring the end date filter

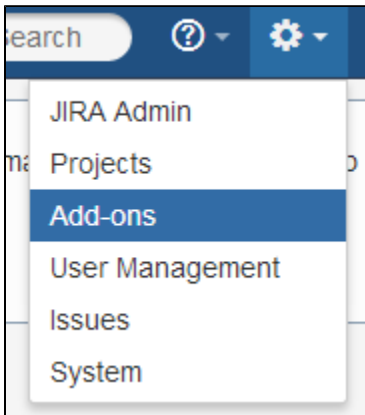

Workload calculates workloads based on the dates associated with the issues assigned to users. The issue field that stores the end date can be a custom field created for this purpose.

The date-type custom fields can be defined in the “**End dates**” section of the Workload configuration and subsequently selected in Workload to calculate workloads based on one of these fields:

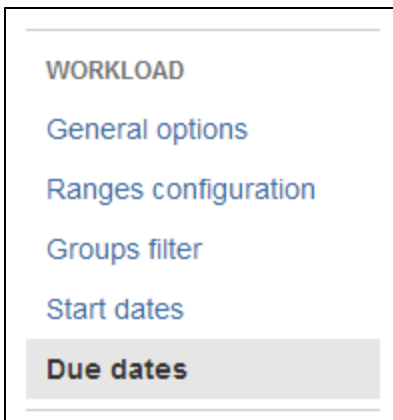

To access the “End dates” configuration:

1. **Log in** as a user with **JIRA Administrator permissions**.
2. Select the “**Add-ons**” option in the Admin menu:

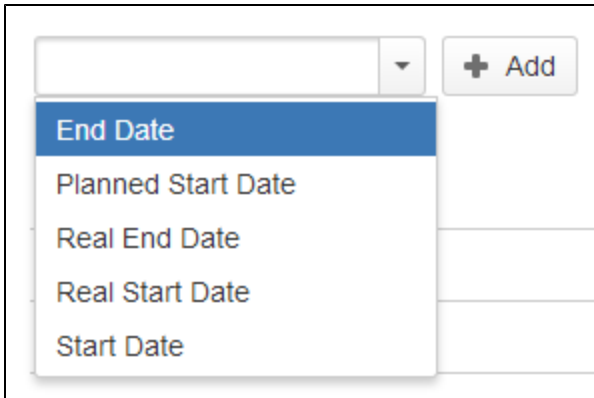

3. Look for the Workload section at the left of the screen and click on “**End dates**”.

Adding a custom field as an end date in Workload

To add a date-type custom field to Workload, simply:

1. Select the custom field from the list.

2. Click "Add"

The custom field added will be shown on the list:

Custom Field	Operations
Real End Date	Delete
Planned End Date	Delete

Deleting an end date custom field from Workload

To delete an end date custom field, click on the "Delete" option in the custom field in question:

Custom Field	Operations
Real End Date	Delete
Planned End Date	Delete

The deleted custom field will be removed from the list.

Custom Field	Operations
Planned End Date	Delete
